PART NUMBER ORDERING EXAMPLES

18 36 -1 04 -CPS
is a Part Number for a 1800, 1/8" dia. shaft, 36° indexing, 1 pole per deck, 4 positions per pole, shorting contacts shaft and panel seals, and PC terminals.

18 45-2 02 -GQ
is a Part Number for a 1800, 1/4" dia. shaft, 45° indexing, 2 poles per deck, 2 positions per pole, non-shorting contacts, RFI-EMI shielding, and solder lug terminals.

OPTIONS

The following options can be added to the standard switch. When ordering, simply add the letters after the basic part number. Options listed in alphabetical order only.
 A = Adjustable stops.
 C = Printed circuit mounting terminals.
 D = Screwdriver shaft.
 F = Fixed stop between the first and last position on a full-turn switch.
 G = RFI-EMI shielding.
 L = Dry circuit (low level).
 P = Panel and shaft seals.
 Q = 1/4" diameter shaft.
 S = Shorting type switch (36° Only)
 T = Pre-tinned terminals.
 Y = Non-turn washer.

 - Q = 1/4" diameter shaft.
 - S = Shorting type switch (36° Only)
 - T = Pre-tinned terminals.
 - Y = Non-turn washer.

1800 SERIES PULL/PUSH

ORDERING INFORMATION

Begin by identifying the switch using the COLE part numbering system as shown:

Indicate this is a SPECIAL switch to ensure that no error is made when the order is entered.

Sample part number:

SPECIAL
1836 - 205 - S (See Standard Code, Page 7)
STOP1PS2PS3PS4 5STOP

This sample part number orders a series 1800 standard style switch, 36° indexing, 2 poles, 5 positions per pole shorting, and push-to turn isolation posts between positions 1-2, 2-3, and 3-4.

Although somewhat long, use of this numbering scheme will prevent error in orders processing. Upon receipt of your order, a special number will be issued unique to this switch. These numbers will not relate to the coding system and will be logged as "special".

The acknowledgment of your order will identify this number. Your specific switch will be the only one identified by this number.

Contact Cole for price.

1800 ISOLATED POSITION SWITCH DESCRIPTION

A special feature of rotary switches is available known as “isolated position”. This feature allows switch shaft rotation that requires the user to either pull or push the shaft before it will respond to rotational torque. The user identifies the position or positions affected by the isolation mechanism.

Incorporation of the isolated position feature in COLE’S SERIES 1800 switches will add 0.217 inches to the length.

SPECIFYING POSITIONS

The Cole System for identifying isolation positions lets you perform the selection by inserting isolation posts next to the positions to be isolated. An 1800 series switch with 36° indexing and continuous rotation is shown below with no isolation position identified in the spaces between the terminals.

10_1_2_3_4_5_6_7_8_9_10

If you isolate positions 1, 2 and 3, the isolation post insertion points are identified by the letters PL (for actuation by pulling the shaft out), or PS (for actuation by pushing the shaft in) as shown below:

10PL1PL2PL3PL4 5 6 7 8 9 10

This indicates that you can only get to positions 1, 2 and 3 by pulling on the shaft while all other positions can be achieved with normal rotational torque on the shaft.

if A Push positions 1 and 2 are isolated from all other position but nor from each other:

10PS12PS3 4 5 6 7 8 9 10

In this case you need to push on the shaft to get to position 1 from position 10 as well as position 2 from position 3. However, to get from position 1 to position 2 merely requires rotate the shaft from position 1 to 2 or 2 to 1.

As a special feature, certain positions on the switch can be isolated in unidirectional mode. That means that the positions can be achieved with normal rotation on the shaft, but requires a push or pull action to get to the next position (Ramp-In). Conversely, reaching the isolated position with a push or pull action on the shaft but requiring normal rotation (Ramp-out) for the next position, is also available. Please contact the factory for special features.

SPECIFYING STOPS

Stops must be incorporated when a switch has multiple poles or specifies less than the numbers of positions available. If a switch with 36° indexing is specified as an 8 position switch with position 1 isolated with push actuation required, the designation would be:

STOP1PS2 3 4 5 6 7 8STOP

Since the stop mechanism is inserted between positions 10 and 1, the isolation post is only required between positions 1 and 2. The stop mechanism inserted between terminals 8 and 9 serves to limit the switch to 8 positions. When stop and isolation mechanism are used in multipole switches, all poles are slaved to the first pole in the case of a 2 pole, 10 position switch with 36° indexing, isolating position 1 will automatically isolate position 6 too. (Refer to the standard switch schematics for 36° indexing switches, page No. 4

1800 SPRING RETURN ROTARY SWITCH DESCRIPTION

A rotary switch with a spring return mechanism allows certain selected positions to have momentary action wherein they can be maintained only with positive force on the shaft. Releasing the shaft will return the switch to its previous position. This feature is available in the COLE SERIES 1800, 1830, and 3600 switches.

Addition of this mechanism to the SERIES 1800 switch adds 0.217 inches to its length; all other dimensions remain unchanged.

The spring return feature in the SERIES 1800 switch is available in those with 36° and 45° angles of throw as a standard.

Custom requirements can be accommodated by contacting the factory.

CONFIGURATIONS AND RESTRICTIONS TABLE

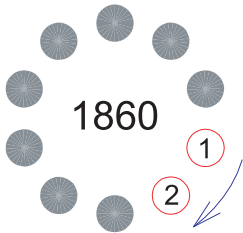

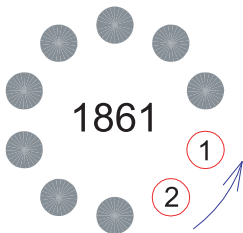

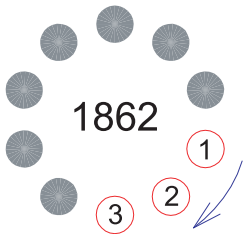

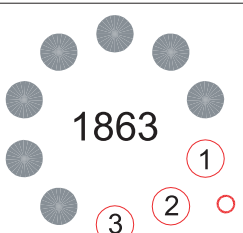

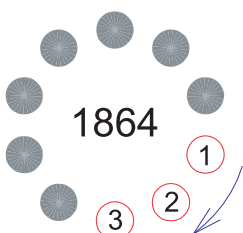

INDEXING	Part No.	Switch Action	No. of poles	Position Per Pole	Terminal Opposite to Flat
36° SPRING RETURN	1860	1->2	1 or 2	2	2
	1861	1<-2	1 or 2	2	1

1800 CONDENSED SERIES

NOTES:

1. Dimensions are in inches.
2. Unless otherwise specified, tolerances are ± 0.005 and $\pm 3^\circ$ on angles (Non-accumulative).
3. Shaft flat angle A is the angle between a line through the center of the shaft, perpendicular to the mounting bushing flats and another line through the center of the shaft and perpendicular to the shaft flat, with switch in position number 1.
4. Position 1 and terminal 1 coincide.
5. Dimension shown are typical for all angles of throw, unless otherwise specified.
6. Screwdriver actuation - S1800 Series switches can also be supplied with a slotted screwdriver shaft. The shaft dimensions are indicated; all other dimensions remain the same. The slot in the shaft lines up with the point of contact of Pole number one.

ORDERING INFORMATION

Sample Code:

The standard Series S1800 is furnished with solder lug terminations, non-shorting and without seals. The standard 10 position switch is continuous rotation.

OPTIONS

The following options can be added to the standard switch. When ordering, simply add the letters after the basic part number.

- A = Adjustable stops
- C = printed Circuit mounting terminals
- F = Fixed stop between the last and first position on the 10 position switch.
- P = Panel and shaft seals.
- S = Shorting type switch (36° only).
- SD = Screwdriver slot.

Series 1800 Technical Data

Specification	Unit	Value	Note:
Military Specifications		MIL-S-3786 Style SR20	
Continuous (Non-Switching) Current Carrying Capacity	Amps	6	at 28 VDC, with max. contact temperature rise of 20°C
Switching Current Capacity at 28 VDC resistive	Amps	0.200	at Atmospheric pressure with 85°C and at reduced Barometric pressure with 25°C
Switching Current Capacity at 115 VAC resistive	Amps	0.150	
Switching Current Capacity at 28 VDC inductive (2.8 H.)	Amps	0.030	
Switching Current Capacity at 28 VDC Lamp Load	Amps	0.100	
Low Level max. capacity	mA	10	at 30 millivolts DC max.
Dielectric Strength, min.	VRMS	600	
Contact resistance, max. (initial)	milliohms (mΩ)	10	
Contact resistance, max. (after life)	milliohms (mΩ)	20	
Insulation resistance, min. (initial)	megaohms (MΩ)	50,000	at 100 VDC
Insulation resistance, min. (after life)	megaohms (MΩ)	25,000	at 100 VDC
Switching Life	cycles	25,000	at rated loads, sea-level, 25°C, 68% relative humidity
Mechanical Life	cycles	25,000	
Rotational Torque, min.	inch ounces	8	
Rotational Torque, max.	inch ounces	24	
Stop Strength, max.	inch pounds	7.5	
Mounting Ferrule Strength	inch pounds	15	
Withstanding Shaft Push Force	pounds	100	
Weight	grams	13	
Molded Parts		thermoplastic	
Contact Surfaces		Gold plated	
Altitude	feet	70,000	typical pressure at 70,000 feet: 0.64 psi
Temperature, min.	degrees Celsius	-65	
Temperature, max.	degrees Celsius	85	
Vibration Tested		Meets	Per MIL-S-3786, MIL-STD-202, Method 204, test condition "B", vibration grade 3
Impact Shock, Medium		Meets	MIL-STD 202; Method 213
Impact Shock, High		Meets	at 100g, MIL-STD 202, Method 207
Moisture Resistant		Meets	MIL-STD 202; Method 106
Salt Spray Resistant		Meets	MIL-STD 202, Method 101, Condition "B"
Explosion Proof		Meets	MIL-STD 202, Method 109
Immersion		Meets	3 feet water, MIL-STD-202, method 104, test condition C
EMI/RFI		Meets	MIL-S-3786, 2 ohms Shaft to ground max.
